INDEX TO AUTHORS

A

Abraham, S. See *Harold, Abraham, and Chaikoff*, 435

Alex, Theodore. See *Saltman, Frisch, Fiskin, and Alex*, 777

Alivisatos, S. G. A., and **Woolley, D. W.** Enzymic synthesis of a new dinucleotide from cozymase by a new method of biosynthesis, 651

Allen, Arthur, Medes, Grace, and **Weinhouse, Sidney.** A study of the effects of growth hormone on fatty acid metabolism *in vitro*, 333

Anfinsen, Christian B. The limited digestion of ribonuclease with pepsin, 405

—. See *Redfield and Anfinsen*, 385

B

Baggett, Billy, Engel, Lewis L., Savard, Kenneth, and **Dorfman, Ralph I.** The conversion of testosterone-3-C^{14} to C^{14}-estradiol-17β by human ovarian tissue, 931

Bailey, J. Leggett, Moore, Stanford, and **Stein, William H.** Peptides obtained by peptic hydrolysis of performic acid-oxidized ribonuclease, 143

Ball, Eric G., Revel, J. P., and **Cooper, Octavia.** The quantitative measurement of γ-glutamyl transpeptidase activity, 895

Balls, A. K. See *McDonald and Balls*, 993

Barness, L. A., Moeksi, H., and **György, P.** Urinary excretion of methylmalonic, α,α-dimethylsuccinic, and other ether-soluble acids in rats, 93

Berg, Clarence P. See *Brown and Berg*, 1083

Bergmann, Felix. See *Dikstein, Bergmann, and Chaimovitz*, 239

Berliner, David L., and **Wiest, Walter G.** The extrahepatic metabolism of progesterone in rats, 449

Bernstein, I. A. Biosynthesis of ribose in *Escherichia coli* grown on C^{14}-labeled glucose, 873

Binkley, S. B. See *Brown and Binkley*, 579

Black, Simon, and **Wright, Nancy G.** Enzymatic formation of glyceryl and phosphoglyceryl methylthiol esters, 171

Bonner, David M. See *Jakoby and Bonner*, 689

Boone, Irene U., Magee, Marguerite, and **Turney, Donna Faye.** Metabolism of C^{14}-labeled isoniazid in vitamin B_6-deficient rats, 781

Brown, Charles S. See *Cunningham and Brown*, 287

Brown, F. Christine, and **Berg, Clarence P.** The effect of adrenalectomy and of cortisone administration on the metabolism of L-tryptophan, 1083

Brown, J. W., and **Binkley, S. B.** Some biochemical changes accompanying penicillin inhibition of *Sarcina lutea*, 579

Buchanan, John M. See *Hartman, Levenberg, and Buchanan*, 1057

Burns, J. J., and **Mosbach, E. H.** Further observations on the biosynthesis of L-ascorbic acid from D-glucose in the rat, 107

C

del Campillo, Alice. See *Stern, Coon, and del Campillo*, 1

—. See *Stern, Coon, del Campillo, and Schneider*, 15

Canellakis, E. S. Pyrimidine metabolism. I. Enzymatic pathways of uracil and thymine degradation, 315

Carter, Herbert E., and **Fujino, Y.** Biochemistry of the sphingolipides. IX. Configuration of cerebrosides, 879

Chaikoff, I. L. See *Harold, Abraham, and Chaikoff*, 435

—. See *Hirsch, Lossow, and Chaikoff*, 509

XUM

Chaimovitz, Moshe. See *Dikstein, Bergmann, and Chaimovitz*, 239
Chance, Britton, and Williams, G. R. Respiratory enzymes in oxidative phosphorylation. VI. The effects of adenosine diphosphate on azide-treated mitochondria, 477
Chen, S. L., and Peppler, H. J. Conversion of cinnamaldehyde to styrene by a yeast mutant, 101
Chernick, Sidney S. See *Rodnan, Chernick, and Schwarz*, 231
Chichester, C. O., Nakayama, T., and Mackinney, G. A carbon balance on glycine and glucose in carotene synthesis, 819
Ciotti, Margaret M. See *Kaplan and Ciotti*, 823
—. See *Kaplan, Ciotti, and Stolzenbach*, 833
Clark, W. Mansfield. See *Lowe and Clark*, 983
Clarke, Hans T. See *Korman and Clarke*, 113, 133
Cline, Richard E. See *Fink, Cline, Henderson, and Fink*, 425
Cobey, Florapearl A. See *Dituri, Cobey, Warms, and Gurin*, 181
Cohn, David V. The oxidation of malic acid by *Micrococcus lysodeikticus*, 413
Colowick, Sidney P. See *Englard and Colowick*, 1019
Cooke, Juanita. See *Redfield and Anfinsen*, 385
Coon, Minor J. See *Stern, Coon, and del Campillo*, 1
—. See *Stern, Coon, del Campillo, and Schneider*, 15
Cooper, Octavia. See *Ball, Revel, and Cooper*, 895
Cummings, John R. See *Levine and Cummings*, 735
Cunningham, Leon W., and Brown, Charles S. The influence of pH on the kinetic constants of α-chymotrypsin-catalyzed esterolysis, 287

D

Dandliker, Walter B. See *Fox and Dandliker*, 1005

INDEX TO SUBJECTS

A

Acetoacetyl-*S*-coenzyme A: Metal chelates, *Stern*, 33
Properties, *Stern*, 33
Acetol: Determination, *Huggins and Miller*, 711
Acid(s): Fatty. *See* Fatty acid
Adenosine diphosphate: Phosphorylation, oxidative, mitochondria, azide-treated, effect, *Chance and Williams*, 477
Adenosinetriphosphatase: Mitochondrial, pentachlorophenol relation, *Weinbach*, 609
Adrenalectomy: L-Tryptophan metabolism, effect, *Brown and Berg*, 1083
Albumin: Blood serum, estrogen binding to, *in vitro*, liver effect, *Szego and Roberts*, 619
Alcohol dehydrogenase: Diphosphopyridine nucleotide effect, *Hoch and Vallee*, 491
Yeast, zinc effect, *Hoch and Vallee*, 491
Aldehyde: Cinnam-. *See* Cinnamaldehyde
Glycol-. *See* Glycolaldehyde
Amino acid(s): Carboxymethyl-. *See* Carboxymethylamino acid
Labeled, incorporation into proteins, guanosine diphosphate and triphosphate effect, *Keller and Zamecnik*, 45
Anaerobic exchange: Reaction, succinic dehydrogenase relation, *Englard and Colowick*, 1019
Apparatus: Respirometer, tissue slice metabolism, *Drabkin and Marsh*, 71
Arginine: -Ornithine transamidination, kidney, *Walker*, 771
Ascites: Ehrlich, carcinoma cells, protein metabolism, *Moldave*, 543
Ascorbic acid: L-, biosynthesis, D-glucose relation, *Burns and Mosbach*, 107
Ascorbic acid—*continued:*
Polysaccharide formation, repair tissue, effect, *Robertson and Hinds*, 791

B

Bacteria: Riboflavin hydrolase, *Yanagita and Foster*, 593
See also Escherichia, Micrococcus, etc.
Blood: Folic acid-active factors, nature, *Usdin, Phillips, and Toennies*, 865
——, precursors, *Toennies, Usdin, and Phillips*, 855
Blood cell: Red, metabolism, *Huennekens, Nurk, and Gabrio*, 971
——, purine nucleoside phosphorylase, *Huennekens, Nurk, and Gabrio*, 971
Blood serum: Albumin, estrogen binding to, *in vitro*, liver effect, *Szego and Roberts*, 619
Magnesium, determination, *Levine and Cummings*, 735

C

Carboxylic acid: Tri-. *See* Tricarboxylic acid
Carboxymethylamino acid(s): *Korman and Clarke*, 113
Carboxymethylamino acid peptides(s): *Korman and Clarke*, 113
Carboxymethyl protein(s): *Korman and Clarke*, 133
Carcinogenesis: 2-Methyl-, and 2-dimethylaminofluorene, effect, *Weisburger, Weisburger, Velat, and Morris*, 845
Carcinoma: Cells, Ehrlich ascites, protein metabolism, *Moldave*, 543
See also Myeloma
Carotene: Synthesis, glycine and glucose carbon balance, *Chichester, Nakayama, and Mackinney*, 819
Cerebroside(s): Chemical structure, *Carter and Fujino*, 879

XUM

Cholestenone: Δ^4-, carbon 14-labeled, metabolism, *Harold, Abraham, and Chaikoff*, 435
Cholesterol: Biosynthesis, terpenoid intermediates, *Dituri, Cobey, Warms, and Gurin*, 181
Choline: Synthesis from glycine, liver, folic acid and vitamin B_{12} effect, *Vohra, Lantz, and Kratzer*, 501
Chymotrypsin: α-, -catalyzed esterolysis, *Cunningham and Brown*, 287
Ribonuclease, performic acid-oxidized, peptides, relation, *Hirs, Stein, and Moore*, 151
Transesterification reactions, effect, *McDonald and Balls*, 993
Cinnamaldehyde: Styrene from, yeast mutant, *Chen and Peppler*, 101
Coenzyme: A, acetoacetyl-*S*-. *See* Acetoacetyl-*S*-coenzyme A
— transferase. *See* Coenzyme A transferase
Muscle D-glyceraldehyde 3-phosphate dehydrogenase, *Fox and Dandliker*, 1005
Coenzyme A transferase: Preparation and properties, *Stern, Coon, del Campillo, and Schneider*, 15
Cortisone: L-Tryptophan metabolism, effect, *Brown and Berg*, 1083
Cozymase: Dinucleotide synthesis from, enzymic, *Alivisatos and Woolley*, 651
Cystine: Tissue culture, methionine and, relation, *Morgan and Morton*, 529
Cytochrome: Microsome, isolation and properties, *Strittmatter and Velick*, 253
—, oxidation-reduction stoichiometry and potential, *Velick and Strittmatter*, 265
Cytochrome reductase: Microsome, diphosphopyridine nucleotide, relation, *Strittmatter and Velick*, 277

D

Dehydrogenase(s): Alcohol. *See* Alcohol dehydrogenase
D-Glyceraldehyde-3-phosphate. *See* Glyceraldehyde-3-phosphate dehydrogenase
Dehydrogenase(s)—*continued:*
Lactic. *See* Lactic dehydrogenase
Malic. *See* Malic dehydrogenase
Pyridine nucleotide analogues and, reaction, *Kaplan, Ciotti, and Stolzenbach*, 833
Succinic. *See* Succinic dehydrogenase
Deoxyribonucleic acid: Formation, liver, regenerating, *Daoust, Leblond, Nadler, and Enesco*, 727
Dialkylfluorophosphatase(s): Microorganisms, *Mounter and Tuck*, 537
Diethyl-*p*-nitrophenyl phosphate: Trypsin inhibition, effect, *Viswanatha and Liener*, 961
Dimethylaminoethanol: Carbon 14- and hydrogen 3-labeled, metabolism, radioformaldehyde isolation, *Johnston and Mackenzie*, 301
Dimethylaminofluorene: 2-, carcinogenic effect, *Weisburger, Weisburger, Velat, and Morris*, 845
Dimethylsuccinic acid: α,α-, urine, *Barness, Mocksi, and György*, 93
Dinucleotide: Flavin adenine. *See* Flavin adenine dinucleotide
Synthesis from cozymase, enzymic, *Alivisatos and Woolley*, 651
Diphosphopyridine nucleotide: 3-Acetylpyridine analogue, chemistry and properties, *Kaplan and Ciotti*, 823
Microsomal cytochrome reductase, relation, *Strittmatter and Velick*, 277
Yeast alcohol dehydrogenase, effect, *Hoch and Vallee*, 491

E

Ehrlich: Ascites carcinoma cells, protein metabolism, *Moldave*, 543
Enzyme(s): Co-. *See* Coenzyme
Dinucleotide synthesis from cozymase, *Alivisatos and Woolley*, 651
Fatty acid metabolism, *Stern, Coon, and del Campillo*, 1
Stern, Coon, del Campillo, and Schneider, 15
(α-*N*-Formyl)-glycinamide ribotide synthesis, *Hartman, Levenberg, and Buchanan*, 1057
Glyceryl methylthiol esters, formation, *Black and Wright*, 171

Enzyme(s)—*continued:*
Glycinamide ribotide synthesis, *Hartman, Levenberg, and Buchanan,* 1057
Phosphoglyceryl methylthiol esters, formation, *Black and Wright,* 171
Respiratory. *See* Respiratory enzyme
Sulfite oxidation, hypoxanthine relation, *Fridovich and Handler,* 323
Tartrate oxidation, mechanism, *Kun,* 223
Thymine degradation, *Canellakis,* 315
Uracil degradation, *Canellakis,* 315
See also Cozymase, Dehydrogenase, etc.
Erythrocyte: *See* Blood cell, red
Escherichia coli: Pyrimidine biosynthesis, *Yates and Pardee,* 743
— —, mechanism, *Yates and Pardee,* 757
Ribose biosynthesis, glucose, carbon 14 labeled, effect, *Bernstein,* 873
Esterase: Thiol-. *See* Thiolesterase
Esterolysis: α-Chymotrypsin catalyzed, *Cunningham and Brown,* 287
Estradiol-17β: Carbon 14-labeled, testosterone-3-C^{14} conversion to, ovary, *Baggett, Engel, Savard, and Dorfman,* 931
Estrogen: Binding to rat serum albumin, *in vitro,* liver effect, *Szego and Roberts,* 619
Ethanol: Dimethylamino-. *See* Dimethylaminoethanol

F

Fatty acid(s): β-Keto, breakdown and synthesis, *Stern, Coon, and del Campillo,* 1
Metabolism, enzymes, *Stern, Coon, and del Campillo,* 1
Stern, Coon, del Campillo, and Schneider, 15
—, growth hormone effect, *Allen, Medes, and Weinhouse,* 333
Synthesis, mammary gland, glucose effect, *Hirsch, Lossow, and Chaikoff,* 509
Flavin adenine dinucleotide: Oxidation-reduction potentials, *Lowe and Clark,* 983
Fluorene: 2-Dimethylamino-. *See* Dimethylaminofluorene
2-Methylamino-. *See* Methylaminofluorene
Methyl-C^{14}-amino-. *See* Methyl-C^{14}-aminofluorene
Folic acid: -Active factors, blood, nature, *Usdin, Phillips, and Toennies,* 865
— —, —, precursors, *Toennies, Usdin, and Phillips,* 855
Choline synthesis from glycine, liver, effect, *Vohra, Lantz, and Kratzer,* 501
Serine synthesis from glycine, liver, effect, *Vohra, Lantz, and Kratzer,* 501
Formaldehyde: Radio-, isolation, dimethylaminoethanol $C^{14}H_3$ metabolism, *Johnston and Mackenzie,* 301
Fructose-1,6-diphosphatase: Purification and properties, *Mokrasch and McIlwain,* 909

G

Glucose: Carbon 14-labeled, ribose biosynthesis, *Escherichia coli,* effect, *Bernstein,* 873
Carotene synthesis, carbon balance, *Chichester, Nakayama, and Mackinney,* 819
D-, L-ascorbic acid biosynthesis, relation, *Burns and Mosbach,* 107
—, carbon 14-labeled, utilization, *Torula utilis* yeast, *Sowden and Frankel,* 587
Fatty acid synthesis, mammary gland, effect, *Hirsch, Lossow, and Chaikoff,* 509
Glyceride synthesis, mammary gland, effect, *Hirsch, Lossow, and Chaikoff,* 509
Glutamyl transpeptidase: γ-, determination, *Ball, Revel, and Cooper,* 895
Glyceraldehyde-3-phosphate dehydrogenase: D-, muscle, coenzyme, *Fox and Dandliker,* 1005

Glyceride: Synthesis, mammary gland, glucose effect, *Hirsch, Lossow, and Chaikoff*, 509
Glyceryl methylthiol ester(s): Formation, enzymatic, *Black and Wright*, 171
Glycinamide ribotide: *Goldthwait, Peabody, and Greenberg*, 555
Chemical structure, *Peabody, Goldthwait, and Greenberg*, 1071
— —, synthesis, enzymatic, and metabolism, *Hartman, Levenberg, and Buchanan*, 1057
Formyl derivative, *Goldthwait, Peabody, and Greenberg*, 555
— —, synthesis, mechanism, *Goldthwait, Peabody, and Greenberg*, 569
α-*N*-Formyl, chemical structure, synthesis, enzymatic, and metabolism, *Hartman, Levenberg, and Buchanan*, 1057
Synthesis, mechanism, *Goldthwait, Peabody, and Greenberg*, 569
Glycine: Carotene synthesis, carbon balance, *Chichester, Nakayama, and Mackinney*, 819
Glycolaldehyde: Metabolism, *Friedmann, Levin, and Weinhouse*, 665
Glycolate: Tobacco leaf culture, effect, *Vickery and Palmer*, 79
Growth: Hormone, fatty acid metabolism, effect, *Allen, Males, and Weinhouse*, 333
Guanosine diphosphate: Amino acids, labeled, incorporation into proteins, effect, *Keller and Zamecnik*, 45
Guanosine triphosphate: Amino acids, labeled, incorporation into proteins, effect, *Keller and Zamecnik*, 45

H

Heart: Malic dehydrogenase, properties, *Wolfe and Neilands*, 61
Mitochondria α-ketoglutaric oxidase, parapyruvate effect, *Montgomery, Fairhurst, and Webb*, 369
—, metabolism, *Montgomery and Webb*, 347, 359
Montgomery, Fairhurst, and Webb, 369
Heart—*continued:*
Mitochondria, pyruvate oxidation, tricarboxylic acid cycle relation, *Montgomery and Webb*, 347
—, tricarboxylic acid cycle, parapyruvate effect, *Montgomery and Webb*, 359
Hemoglobin: Met-. *See* Methemoglobin
Histamine: Metabolism, ring N methylation, relation, *Schayer and Karjala*, 307
Homoserine: Metabolic pathways, *Matsuo, Rothstein, and Greenberg*, 679
Hydrazine: Phenyl-. *See* Phenylhydrazine
Hydrolase: Riboflavin. *See* Riboflavin hydrolase
Hypoxanthine: Sulfite oxidation, enzymatic, relation, *Fridovich and Handler*, 323

I

Iron: Metabolism, liver, kinetics, *Saltman, Frisch, Fiskin, and Alex*, 777
Isoniazid: Carbon 14-labeled, metabolism, vitamin B_6 effect, *Boone, Magee, and Turney*, 781

K

Ketoglutaric oxidase: α-, heart mitochondria, parapyruvate effect, *Montgomery, Fairhurst, and Webb*, 369
Kidney: Arginine-ornithine transamidination, *Walker*, 771
Kynurenine transaminase: *Neurospora, Jakoby and Bonner*, 689

L

Lactic dehydrogenase: *Hakala, Glaid, and Schwert*, 191
Lipide(s): Sphingo-. *See* Sphingolipide
Liver: Choline synthesis from glycine, folic acid and vitamin B_{12} effect, *Vohra, Lantz, and Kratzer*, 501
Estrogen binding to rat serum albumin, *in vitro*, effect, *Szego and Roberts*, 619
Iron metabolism, kinetics, *Saltman, Frisch, Fiskin, and Alex*, 777

XUM

Liver—*continued:*
Mitochondria, L-xylulose reduction to xylitol, *Touster, Reynolds, and Hutcheson,* 697
Necrotic, respiration, tocopherols, effect, *Rodnan, Chernick, and Schwarz,* 231
Regenerating, cell production, *Daoust, Leblond, Nadler, and Enesco,* 727
—, deoxyribonucleic acid formation, *Daoust, Leblond, Nadler, and Enesco,* 727
Serine synthesis from glycine, folic acid and vitamin B_{12} effect, *Vohra, Lantz, and Kratzer,* 501
Thymine, carbon 14-labeled, metabolism, *in vitro, Fink, Cline, Henderson, and Fink,* 425
—, methyl carbon 14-labeled, metabolism, *in vitro, Fink, Cline, Henderson, and Fink,* 425

M

Magnesium: Blood serum, determination, *Levine and Cummings,* 735
Malic acid: Oxidation, *Micrococcus lysodeikticus, Cohn,* 413
Malic dehydrogenase: Heart, properties, *Wolfe and Neilands,* 61
Malonic acid: Methyl-. *See* Methylmalonic acid
Mammary gland: Fatty acid synthesis, glucose effect, *Hirsch, Lossow, and Chaikoff,* 509
Glyceride synthesis, glucose effect, *Hirsch, Lossow, and Chaikoff,* 509
Melanocyte: Stimulating hormone, isolation, pituitary, *Lee and Lerner,* 943
Metabolism: Tissue slices, respirometer, *Drabkin and Marsh,* 71
Methemoglobin: Reduction, phenylhydrazine effect, *Rostorfer and Totter,* 1047
Methionine: Carbon chain metabolism, *Kisliuk, Sakami, and Patwardhan,* 885
Tissue culture, cystine and, relation, *Morgan and Morton,* 529
Methylaminofluorene: 2-, carcinogenic effect, *Weisburger, Weisburger, Velat, and Morris,* 845
Methyl-C^{14}-aminofluorene: 2-, methyl group, fate, *Weisburger, Weisburger, Velat, and Morris,* 845
Methylmalonic acid: Urine, *Barness, Moeksi, and György,* 93
Micrococcus lysodeikticus: Malic acid oxidation, *Cohn,* 413
Microorganism(s): Dialkylfluorophosphatases, *Mounter and Tuck,* 537
Ribonucleic acid, determination, *Webb,* 635
See also Bacteria
Microsome: Cytochrome, isolation and properties, *Strittmatter and Velick,* 253
—, oxidation-reduction stoichiometry and potential, *Velick and Strittmatter,* 265
— reductase, diphosphopyridine nucleotide, relation, *Strittmatter and Velick,* 277
Mitochondrion: Adenosinetriphosphatase, pentachlorophenol relation, *Weinbach,* 609
Azide-treated, phosphorylation, oxidative, adenosine diphosphate effect, *Chance and Williams,* 477
Heart, α-ketoglutaric oxidase, parapyruvate effect, *Montgomery, Fairhurst, and Webb,* 369
—, metabolism, *Montgomery and Webb,* 347, 359 *Montgomery, Fairhurst, and Webb,* 369
—, pyruvate oxidation, tricarboxylic acid cycle relation, *Montgomery and Webb,* 347
—, tricarboxylic acid cycle, parapyruvate effect, *Montgomery and Webb,* 359
Liver, L-xylulose reduction to xylitol, *Touster, Reynolds, and Hutcheson,* 697
Mosaic: Tobacco, virus, nucleic acids, ribonuclease effect, *Reddi and Knight,* 629

Muscle: D-Glyceraldehyde-3-phosphate dehydrogenase coenzyme, *Fox and Dandliker*, 1005
See also Heart
Myeloma: Bence-Jones protein, synthesis and excretion, *Putnam, Meyer, and Miyake*, 517
See also Carcinoma

N

Neurospora: Kynurenine transaminase, *Jakoby and Bonner*, 689
Niazid: Iso-. *See* Isoniazid
Nitrogen: Ring, methylation, histamine metabolism relation, *Schayer and Karjala*, 307
Nuclease: Ribo-. *See* Ribonuclease
Nucleic acid(s): Deoxyribo-. *See* Deoxyribonucleic acid
Ribo-. *See* Ribonucleic acid
Tobacco mosaic virus, ribonuclease effect, *Reddi and Knight*, 629
Nucleotidase: 5′-, action, mechanism, *Koshland and Springhorn*, 469
Nucleotide: Di-. *See* Dinucleotide
Diphosphopyridine. *See* Diphosphopyridine nucleotide
Pyridine. *See* Pyridine nucleotide

O

Organic acid(s): Tobacco leaves, metabolism, *Vickery and Palmer*, 79
Ornithine: -Arginine transamidination, kidney, *Walker*, 771
Ovary: Testosterone-3-C^{14} conversion to C^{14}-estradiol-17β, *Baggett, Engel, Savard, and Dorfman*, 931
Oxidase: α-Ketoglutaric. *See* Ketoglutaric oxidase
Oxidation-reduction: *Lowe and Clark*, 983

P

Papain: Thiolesterase, *Johnston*, 1037
Parapyruvate: Heart mitochondria α-ketoglutaric oxidase, effect, *Montgomery, Fairhurst, and Webb*, 369
— — tricarboxylic acid cycle, effect, *Montgomery and Webb*, 359
Penicillin: *Sarcina lutea* inhibition, biochemistry, *Brown and Binkley*, 579
Pentachlorophenol: Mitochondrial adenosinetriphosphatase, relation, *Weinbach*, 609
Pepsin: Ribonuclease digestion, effect, *Anfinsen*, 405
—, performic acid-oxidized, peptides, relation, *Bailey, Moore, and Stein*, 143
Peptidase: Glutamyl trans-. *See* Glutamyl transpeptidase
Peptide(s): Carboxymethylamino acid. *See* Carboxymethylamino acid peptide
Ribonuclease, performic acid-oxidized, chymotryptic hydrolysis, *Hirs, Stein, and Moore*, 151
—, — —, peptic hydrolysis, *Bailey, Moore, and Stein*, 143
Phenol: Pentachloro-. *See* Pentachlorophenol
Phenylhydrazine: Methemoglobin reduction, effect, *Rostorfer and Totter*, 1047
Phosphatase(s): Adenosinetri-. *See* Adenosinetriphosphatase
Dialkylfluoro-. *See* Dialkylfluorophosphatase
Fructose-1,6-di-. *See* Fructose-1,6-diphosphatase
Phosphate: Adenosine di-. *See* Adenosine diphosphate
Diethyl *p*-nitrophenyl. *See* Diethyl *p*-nitrophenyl phosphate
Guanosine di-. *See* Guanosine diphosphate
— tri-. *See* Guanosine triphosphate
Propanediol. *See* Propanediol phosphate
Phosphatide(s): Titration, *Garvin and Karnovsky*, 211
Phosphoglyceryl methylthiol ester(s): Formation, enzymatic, *Black and Wright*, 171
Phosphorylase: Purine nucleoside. *See* Purine nucleoside phosphorylase

Phosphorylation: Oxidative, enzymes, respiratory, *Chance and Williams*, 477
—, mitochondria, azide-treated, adenosine diphosphate effect, *Chance and Williams*, 477
Pituitary: Melanocyte-stimulating hormone isolation, *Lee and Lerner*, 943
Polysaccharide: Formation, repair tissue, ascorbic acid effect, *Robertson and Hinds*, 791
Pregnen-20α-ol-3-one: Δ^4-, progesterone metabolism to, *Wiest*, 461
Progesterone: Metabolism, extrahepatic, *Berliner and Wiest*, 449
Δ^4-Pregnen-20α-ol-3-one from, *Wiest*, 461
Propanediol phosphate: 1,2-, determination, microcolorimetric, *Huggins and Miller*, 377
1,2-, metabolism, yeast, *Huggins and Miller*, 719
Protein(s): Amino acids, labeled, incorporation into, guanosine diphosphate and triphosphate effect, *Keller and Zamecnik*, 45
Bence-Jones, myeloma, synthesis and excretion, *Putnam, Meyer, and Miyake*, 517
Carboxymethyl. *See* Carboxymethyl protein
Metabolism, Ehrlich ascites carcinoma cells, *Moldave*, 543
Oxidized, chemical constitution, *Hirs, Stein, and Moore*, 151
Proteinase(s): Yeast, *Lenney*, 919
Purine(s): Biosynthesis, *Hartman, Levenberg, and Buchanan*, 1057
Purine nucleoside phosphorylase: Blood cell, red, *Huennekens, Nurk, and Gabrio*, 971
Pyridine nucleotide: Analogues, dehydrogenases and, reaction, *Kaplan, Ciotti, and Stolzenbach*, 833
Pyrimidine: Biosynthesis, *Escherichia coli*, *Yates and Pardee*, 743
—, — —, mechanism, *Yates and Pardee*, 757
Metabolism, *Canellakis*, 315
Pyruvate: Oxidation, heart mitochondria, tricarboxylic acid cycle relation, *Montgomery and Webb*, 347
Para-. *See* Parapyruvate

R

Respiratory enzyme(s): Phosphorylation, oxidative, *Chance and Williams*, 477
Respirometer: Tissue slice metabolism, *Drabkin and Marsh*, 71
Riboflavin hydrolase: Bacterial, *Yanagita and Foster*, 593
Ribonuclease: Chemical constitution, *Redfield and Anfinsen*, 385
Digestion, pepsin effect, *Anfinsen*, 405
Performic acid-oxidized, peptides, chymotryptic hydrolysis, *Hirs, Stein, and Moore*, 151
— —, —, peptic hydrolysis, *Bailey, Moore, and Stein*, 143
Tobacco mosaic virus nucleic acids, effect, *Reddi and Knight*, 629
Ribonucleic acid: Microorganisms, determination, *Webb*, 635
Tissues, determination, *Webb*, 635
Ribose: Biosynthesis, *Escherichia coli*, glucose, carbon 14-labeled, effect, *Bernstein*, 873
Ribotide: Glycinamide. *See* Glycinamide ribotide

S

Saccharide: Poly-. *See* Polysaccharide
Sarcina lutea: Inhibition, penicillin, biochemistry, *Brown and Hinkley*, 679
Serine: Homo-. *See* Homoserine
Synthesis from glycine, liver, folic acid and vitamin B_{12} effect, *Vahra, Lantz, and Kratzer*, 501
Sphingolipide(s): Biochemistry, *Carter and Fujino*, 879
Styrene: Cinnamaldehyde conversion to, yeast mutant, *Chen and Peppler*, 101
Succinate: Tocopheryl-5-methyl-C^{14}-. *See* Tocopheryl-5-methyl-C^{14}-succinate

Succinic acid: α,α-Dimethyl-. *See* Dimethylsuccinic acid
Succinic dehydrogenase: Anaerobic exchange reaction relation, *Englard and Colowick*, 1019
Sulfite: Oxidation, enzymatic, hypoxanthine relation, *Fridovich and Handler*, 323
Sulfur: Metabolism, tissue cultures, *Morgan and Morton*, 529

T

Tartrate: Oxidation, enzymatic mechanism, *Kun*, 223
Terpenoid: Intermediates, cholesterol biosynthesis, *Dituri, Cobey, Warms, and Gurin*, 181
Testosterone: Carbon 14-labeled, C^{14}-estradiol-17β from, ovary, *Baggett, Engel, Savard, and Dorfman*, 931
Thiolesterase: Papain, *Johnston*, 1037
Thymine: Carbon 14-labeled, metabolism, *in vitro*, liver, *Fink, Cline, Henderson, and Fink*, 425
Degradation, enzymatic, *Canellakis*, 315
Methyl carbon 14-labeled, metabolism, *in vitro*, liver, *Fink, Cline, Henderson, and Fink*, 425
Tissue: Repair, polysaccharide formation, ascorbic acid effect, *Robertson and Hinds*, 791
Tissue culture: Cystine-methionine relation, *Morgan and Morton*, 529
Sulfur metabolism, *Morgan and Morton*, 529
Tobacco: Leaves, glycolate solutions, culture effect, *Vickery and Palmer*, 79
—, organic acids, metabolism, *Vickery and Palmer*, 79
Mosaic virus, nucleic acids, ribonuclease effect, *Reddi and Knight*, 629
Tocopherol(s): α-, metabolites, urine, *Simon, Eisengart, Sundheim, and Milhorat*, 807
Liver, necrotic, respiration, effect, *Rodman, Chernick, and Schwarz*, 231
Tocopheryl-5-methyl-C^{14}-succinate: *d*-α-, absorption and excretion, *Simon, Gross, and Milhorat*, 797
Torula utilis: Yeast, D-glucose, carbon 14-labeled, utilization, *Sowden and Frankel*, 587
Transaminase: Kynurenine. *See* Kynurenine transaminase
Transesterification: Reactions, chymotrypsin effect, *McDonald and Balls*, 993
Tricarboxylic acid: Cycle, heart mitochondria, parapyruvate effect, *Montgomery and Webb*, 359
—, — — pyruvate oxidation, relation, *Montgomery and Webb*, 347
Trypsin: Chymo-. *See* Chymotrypsin
Inhibition, urea and diethyl *p*-nitrophenyl phosphate effect, *Viswanatha and Liener*, 961
Tryptophan: L-, metabolism, adrenalectomy and cortisone effect, *Brown and Berg*, 1083

U

Uracil: Degradation, enzymatic, *Canellakis*, 315
Urea: Trypsin inhibition, effect, *Viswanatha and Liener*, 961
Uric acid: *Dikstein, Bergmann, and Chaimovitz*, 239
Related compounds, *Dikstein, Bergmann, and Chaimovitz*, 239
Substituted, chromatography, paper, *Dikstein, Bergmann, and Chaimovitz*, 239
Urine: α,α-Dimethylsuccinic acid excretion, *Barness, Moeksi, and György*, 93
Methylmalonic acid excretion, *Barness, Moeksi, and György*, 93
α-Tocopherol metabolites, *Simon, Eisengart, Sundheim, and Milhorat*, 807

V

Virus: Tobacco mosaic, nucleic acids, ribonuclease effect, *Reddi and Knight*, 629

Vitamin: B_6, isoniazid, carbon 14-labeled, metabolism, effect, *Boone, Magee, and Turney,* 781
B_{12}, choline synthesis from glycine, liver, effect, *Vohra, Lantz, and Kratzer,* 501
—, serine synthesis from glycine, liver, effect, *Vohra, Lantz, and Kratzer,* 501
E, metabolism, *Simon, Gross, and Milhorat,* 797
Simon, Eisengart, Sundheim, and Milhorat, 807

X

Xanthine(s): Hypo-. *See* Hypoxanthine
Substituted, chromatography, paper, *Dikstein, Bergmann, and Chaimovitz,* 239
Xylitol: L-Xylulose reduction to, liver mitochondria, *Touster, Reynolds, and Hutcheson,* 697
Xylulose: L-, reduction to xylitol, liver mitochondria, *Touster, Reynolds, and Hutcheson,* 697

Y

Yeast: Alcohol dehydrogenase, diphosphopyridine nucleotide effect, *Hoch and Vallee,* 491
— —, zinc effect, *Hoch and Vallee,* 491
Mutant, cinnamaldehyde conversion to styrene, *Chen and Peppler,* 101
1,2-Propanediol phosphate metabolism, *Huggins and Miller,* 719
Proteinases, *Lenney,* 919
Torula utilis, D-glucose, carbon 14-labeled, utilization, *Sowden and Frankel,* 587

Z

Zinc: Yeast alcohol dehydrogenase, effect, *Hoch and Vallee,* 491
Zymase: Co-. *See* Cozymase
